

# NuVue Business Learning System

**NuVue Business Solutions** works with business owners and managers in locally training and developing their people. Today's fast paced world of business doesn't always afford the time to send people away for training and development, with the realization that managers and employees need to improve their skills in order to stay competitive in business.

The **Business Learning Library** from NuVue offers over 330 topic modules to choose from, on computer CD-rom video, to help you immediately meet your greatest challenges. Subject matter content is from the top business authors and experts in their fields of sales, management, customer service, interpersonal skills, and more. The Business Learning Library is designed for you to get quick access to the subjects you are most interested in taking today.

The **4ROI Assessment Tool** is included with the Business Learning Library. 4ROI has seven specific assessments that managers and employees can take to rate their current and desired business skills. 4ROI assessment results produce course recommendations for individuals and business teams directly from the Business Learning Library of over 330 topics.

The **Learning Management System (LMS)** is available to individual participants enrolled on their own personal web site. The business LMS monitors individuals or groups in their curriculum progress, making it easy to track for results.

## Peer2Peer

**Discussion Sessions** work for you in focusing your managers and employees on your key goals and best practices.

Implementation of Peer2Peer discussions further reinforces learning and retention. When the learning topics are discussed, taught, and put into action, it creates a team process of accountability for results.
